CEAS

Corporate Emergency Access System

Crisis Response and Recovery, Access-Control System

The CEAS program is America's largest provider of crisis access and reentry solutions recognized by emergency management and law enforcement officials.

The Corporate Emergency Access System (CEAS) is a crisis response and recovery, access-control program. CEAS allows state and local emergency managers and public safety officials to facilitate entry of credentialed private sector essential personnel into areas that are off limits to the public because of emergency conditions.

Access is accomplished using a centrally issued, common ID card recognized by law enforcement personnel when authorized by government authority.

For more information about starting a CEAS program in your area,
call 888-353-2638 or e-mail support@ceas.com

Benefits

Developed through the collaborative effort of the public and the private sectors, CEAS provides these additional benefits.

Partnership—Creates a bond between local government and private sector businesses for the purpose of minimizing economic impact and speeding community recovery from disasters or emergencies.

Access—Allows essential employees to travel and/or enter restricted areas, using the CEAS ID, to sustain operations and initiate recovery.

Identification—CEAS ID cards enable law enforcement officials to easily recognize essential personnel responsible for maintaining infrastructure and restoring vital lifelines and private sector operations.

Resiliency—Speeds area recovery and reduces enterprise risk by facilitating the inflow of key resources critical to helping private sector businesses and communities rebound quickly from a disaster.

Security—Creates a predefined process ensuring that the right people have access to the right places at the right time.

Organizations can register for annual subscriptions.

Enrollment is simple, affordable, and will increase your organization's disaster resiliency.

AMERICA'S LARGEST PROVIDER OF CRISIS ACCESS AND REENTRY SOLUTIONS

Access-Control System for Essential Personnel

The private sector is responsible for operating and maintaining the majority of the critical infrastructure that helps communities function. Many people take for granted basic, essential lifelines (power, fuel, water, money, food, medication, etc.) and assume these resources will always be available.

By assisting business continuity, CEAS helps to restore and sustain the essential services and resources that communities rely on.

There is an intrinsic connection between government, the private sector, and the community highlighting the purpose of the CEAS program, which is to help restore normalcy to disaster-impacted communities as quickly as possible. This is done by removing obstacles to travel and access that impede recovery. CEAS helps facilitate the timely flow of vital resources and essential personnel to affected communities.

Goals

To create a recognized predefined process for crisis access control that promotes the rapid recovery of communities and the private sector operated community lifelines.

To establish access protocols between public safety officials and essential personnel for emergency travel and reentry into restricted areas.

To ease the burden on government by expediting the recovery of critical infrastructure services and the flow of vital resources and personnel needed to alleviate the effects of disasters on communities.

CEAS Assists the Public and Private Sectors

- CEAS helps governments to facilitate the recovery of public, critical infrastructures by providing a method to easily recognize essential private sector employees for travel and access to their privately owned and operated facilities.

- CEAS also assists the recovery of businesses that provide vital community lifelines by establishing a clear methodology for crisis recovery and reentry, a process often overlooked in emergency planning.

- CEAS is offered at no cost to governments. Costs are borne by private sector program participants through program registration fees.

CEAS Programs

CEAS programs can be tailored to jurisdictional needs. CEAS can be operated on a statewide, county, or city basis and can be interoperable with any existing CEAS program.

Contact our support specialists to discuss how CEAS can work for you.

Cooperative Service

Developed by the Business Network of Emergency Resources (BNET), a nonprofit organization, through the collaborative effort of the government and the private sector, CEAS has been used in some of the nation's largest economic centers for more than a decade.

CEAS leads the way in providing secure, emergency access control for private sector entities, creating a best practice in public-private partnerships. By reducing risk and aiding crisis management, this state-of-the-art system enables private sector businesses to acquire pre-event, emergency access identification. These ID cards are acknowledged and accepted locally by participating governments when area access is crucial.

Cutting-Edge Identification

BNET continues to optimize CEAS with new and evolving technology. The system is entirely web-based, resulting in an improved end-to-end customer experience. CEAS ID cards meet or exceed today's security standards without relying on high-cost technologies with built-in obsolescence.

Participating Partners

CEAS cards are accepted by participating state and local governments in some of the nation's most important economic and educational centers. Today, countless organizations of all types that take the continuity of services and operations seriously use the CEAS program.

To learn more about CEAS and how you can enroll your organization,
